SoundSteps

FOR HEARING CARE PROFESSIONALS

Listening practice to suggest between visits

SoundSteps is an app for short listening practice at home, on a phone, tablet or computer. A quick listening check picks the starting point.

What people practice

- Single words, and pairs of words that sound alike
- Sentences and short conversations
- Everyday scenes, like a pharmacy counter or a call from family
- Background noise, added at their own pace

All voices in the app are computer-generated.

Who it's for

Adults with cochlear implants or hearing aids, and family members who want to help.

What it costs

Free to start, and the free version stays free. Premium, with the full library, is $9.99 a month or $89.99 a year (store prices vary by country).

The first 7 days include full Premium, with no card needed.

Practice complements, not replaces, care from a hearing professional.

SoundSteps does not assess hearing or change hearing device settings.
